Service area:
Environmental consulting

Project data:

- The accident directive was to be updated in the form of safety reports and safety concepts for 11 tank farms at VTG.

Project description:
Implementation of the new accident directive (12.BImSchV) for tank farms

Services:

- Classification of the tank farms according to safety concept and compulsory tank farm safety reporting
- Preparation of safety concept models for application in all tank farms
- Inspection of all relevant documents
- Adaptation of existing alarm- and hazard defence plans
- Establishment of site-related false information
- Acquisition of the false information and correction of this information in the current documentation
- Agreement of the developed safety concepts and reports with the responsible authorities
- Integration of modifications/amendments required by the authorities

Customer benefits:

- Specialist technical support to satisfy current legal conditions
- Punctual processing, thus avoidance of fines
- Legal security
