

Contamination Register for the Staatstheater Darmstadt

Project Description:

Comprehensive remodeling works were planned for the state theatre of Darmstadt. In preparation of the works, detailed investigations with regard to contamination were required.

HPC Services:

Detailed investigations with regard to contamination by substances used during construction and specific for certain kinds of use (PAH, treated wood construction parts, heavy metals, hydrocarbons, PCB). The inspection and analytical results were evaluated and represented in a report taking into account the further use of the building and planned remodeling and renovation works.

Considering the investigation results, remediation and disposal concepts were at first established for the structures contaminants. These concepts represented the basis for subsequent invitation for tender of the remedial action required.

- Determination of contaminants used during construction
- Establishment of a contamination register
- Contaminant evaluation considering further use
