

Groundwater Remediation Chemnitz

Project description:

An additional groundwater remediation over a period of 5 years was necessary after a comprehensive soil decontamination during the construction of a new motor factory. The remediation activities were planned and implemented during the construction of the factory and completed during productive operation.

Services:

- Planning of the pump-and-treat plant
- Approval
- Plant construction and operation
- Disposal of generated waste
- Decommissioning of the plant
- Final documentation

Client benefits:

- Complete cost certainty since general contractor took over the guarantee for the remediation success
